

## Chapter 41 - Format

### Theory:

String formatting allows inserting variables into strings in various ways.

### Code Example:

```
a = "{0} is a good boy {1}".format("harry", "boy")
b = "{1} is a good boy {0}".format("milan", "boy")
print(a)
print(b)
# using format func
name = input("Enter a name : ")
number = input("Enter a number : ")
marks = input("Enter a marks : ")
info = "The name is {} , his marks are {} and phone number is {} ".format(name , marks ,
number)
print(info)
```
