

## Chapter 49 - Raough

### Theory:

This chapter covers the topic of Raough.

### Code Example:

```
# Define the function using match-case
def http_status(status):
    match status:
        case "200":
            return "■ OK - Request succeeded"
        case "400":
            return "■ Bad Request"
        case "401":
            return "■ Unauthorized"
        case "403":
            return "■ Forbidden"
        case "404":
            return "■ Not Found"
        case "500":
            return "■ Internal Server Error"
        case _:
            return "■ Unknown status code"
    # Get user input
    b = input("Enter an HTTP status : ")
    # Call the function and print result
    o = http_status(b)
    print(o)
```
