Chapter 27 - Chapter6.2.

Theory:

This chapter covers the topic of Chapter6.2..

Code Example:

```python
maths = int(input("Enter maths marks: "))
Geo = int(input("Enter geo marks: "))
java = int(input("Enter java marks: "))
# Check for total percentage
total_percentage = (maths + Geo + java) / 300 * 100
if maths < 33 or Geo < 33 or java < 33:
print("You are failed due to marks less than 33 in a subject.")
elif total_percentage < 40:
print("You are failed due to total percentage less than 40%.")
else:
print("Congrats! You are passed ■")
```
